

Among rituximab, intravenous immunoglobulin, and bortezomib, is there any combination of these drugs used together? If so, please specify the exact combinations. Also, clearly state the effects of these combinations.

## Answer 1

RAG

Rituximab + Bortezomib This combination has been studied for its potential... The results of this study suggest a possible synergy between these two agents... Therefore, the effect of this combination is considered **positive**.

## **Answer 2**

Rituximab, intravenous immunoglobulin, and bortezomib are all drugs used to treat... While each drug has its own mechanism of action, they can be used together in certain combinations to enhance their effectiveness.

## **Answer 3**

**Sequential Fusion** 

Rituximab, and intravenous immunoglobulin are used in combination, but the effects of the combination are **negative**. rituximab, and bortezomib are used in combination, but the effects of the combination are negative.

## Check Standard Answer

[{"comb drugs": ["intravenous immunoglobulin", "rituximab"], "comb effect": "negative", {"comb drugs": ["bortezomib", "rituximab"], "comb effect ": "negative "]
