## Original file

```
public void handleEvent(Event event){
    String path = event.getProperty(PATH);
-- log.info("Library at {} validated.", path);
    if (PATH != null) {
        String includePath = PATH
        ...
```

- Remove logging statement
- Construct < Logging Point>

## **Model input**

```
public void handleEvent(Event event){
    String path = event.getProperty(PATH);
    <Logging Point>
    if (PATH != null) {
        String includePath = PATH
```

. . .

## **Model output**

Generate logging statements

```
public void handleEvent(Event event){
   String path = event.getProperty(PATH);
```

+ log.debug("Reload received for path:" + path);
if (PATH != null) {
 String includePath = PATH

. . .
